mailFactory FloorMonitor

Manage your Production with the mailFactory FloorMonitor

In most mail production environments, the use of mailFactory Reporter will give the users the information that they require for production and efficiency numbers. However, to meet the needs of those customers that need a real time reporting solution that can be monitored from anywhere in the mailroom mailFactory FloorMonitor was created.

Increased Productivity and Efficiency

The FloorMonitor was designed to increase efficiency and productivity while reducing labor and waste costs. The FloorMonitor monitors all data from the floor and compiles it in an easy to read and customizable black screen with data-driven color and clear numeric display for quick comprehension. With the FloorMonitor the operator can be more productive than ever thought possible by managing uptime and machine and operator performance specifics all from the comfort of an ergonomically designed and user friendly job management system. The easy to use graphical user interface (GUI) is easily customizable and can be used to focus on a variety of different tasks. With the FloorMonitor production targets can be set and tracked while the operator is automatically updated about new jobs and job progress. The FloorMonitor can add optimal performance to any production facility. The increased efficiency implemented by the FloorMonitor quickly pays for itself by increased productivity.

Mobile Connectivity

The software for mailFactory FloorMonitor is a web based application and has been installed on the company's web server. All of the preconfigured variables will be setup according to the requirements for the project. Future enhancements to the product will allow for manually updating the expected numbers when they change. To run the mailFactory FloorMonitor application all the user has to do is open Internet Explorer and navigate to the web-site provided for mailFactory FloorMonitor.

Kern ADF

Automated Document Factory: Kern provides individually tailored software solutions to optimize the monitoring and management of Kern system processes.

Benefits of mailFactory FloorMonitor

Versatility

The FloorMonitor displays machine up-time statistics and operator and machine production statistics. The FloorMonitor displays mail jobs waiting to run and running with estimated completion times in regards to SLA.

User Friendly

The FloorMonitor is easily customizable and automatically updates operators about critical information. Job progress and new jobs can easily be set and tracked and the FloorMonitor allows operators to manage uptime and machine and operator performance with unsurpassed efficiency.

Easily Navigable

The FloorMonitor automatically cycles through updates on Enterprise Throughput, Site Throughput, Operator Productivity, Operator Efficiency, and Job SLA's. The operator can easily pause any screen and manually cycle through to reach the desired information.

The success of our customers is the most important part of our business. At Kern, we believe that we don't succeed unless our customers succeed. Fast machines, advanced technology, and outstanding technical support are the fundamental strengths of what we do. By establishing a mutually beneficial partnership, both our customers and Kern are able to achieve success and we back it up with a guarantee.

Automatic and Manual

The screens will switch about every 15 seconds and update about every 5 seconds while they are being displayed. Even though this software was designed to be displayed on large LCD screens in the mail production environment it can also be used directly from any computer with a web browser. With this in mind there are manual controls so the user can switch between screens and only display the screen that would be most useful to them.

Product Properties

With the extensive informational fields offered by the FloorMonitor, operators are given all the information needed to maximize productivity. Applications of the FloorMonitor inform the operator of target mail production totals compared to actual mail production totals. There is a graphical progress bar to see how easily the job is coming along. There is a color coded status bar that shows green if the machine is running, yellow if the machine is stopped or in ready mode, or red if the machine is in error. With the range of applications the FloorMonitor offers, operators have all the information they need to maximize their mail production.

"Your Kern product is guaranteed to provide a minimum of Ten Years of production grade output, when maintained under a Kern Full Service Maintenance Agreement. If we can't fix it, we'll replace it. Period."
